The screenshot shows a Java Swing window titled "MainWindow" with a standard Windows-style title bar (minimize, maximize, close buttons). The window contains a form titled "Data Mahasiswa". At the top of the form is a table with one row of student data. Below the table are four input fields labeled "NIM", "Nama", "Jurusan", and "No. Telp". At the bottom of the form are four buttons: "TAMBAH", "EDIT", "CLEAR", and "HAPUS".

2. Perbaiki codingan

```
1  from PyQt5.QtWidgets import *
2
3  app = QApplication([])
4
5  button = QPushButton('Click')
6
7  def on_button_clicked():
8
9      alert = QMessageBox()
10
11      alert.setText('You clicked the button!')
12
13      alert.exec_()
14
15
16
17  button.clicked.connect(on_button_clicked)
18
19  button.show()
20
21  app.exec_();
```

Setelah diperbaiki ternyata terdapat masalah indentasi pada akhir baris yaitu pada codingan “app.exec\_();”. Jadi perlu disamakan penempatannya agar dapat berjalan.
